- 7. Garbage in the cities was collected twice weekly and hauled to the dumps outside the city limits but was not burned. About the only city which its garbage by burning was Bucharest.
- 8. The water supply was adequate in most of the country; the main source of water was wells. Bucharest had adequately developed its water supply. The source of water for Bucharest was the Dambovita Kiver. About the only place which distilled its water was Bucharest. Spring wells are not uncommon. Water is plentiful and can be had by drilling from 15 to 20 meters as the average farmer does. I do not recall any instances in which water was sampled or tested by the government or any of the city sanitation departments.
- There was always a great deal of malaria in the southern sectors of Rumania, particularly around the Danubian Delta near Bulgaria.
- 10. Rumanian diet in 1947 was composed primarily of palenta, a national dish, potatoes and bread. Vegetables and meats were scarce with meat exceptionally hard to obtain.

- end .
